

SECURITY

CYBERATTACKS ARE GETTING MORE SOPHISTICATED

Cyberthreats are at an all-time high—and growing. As the business community continues to operate in a largely remote environment, cybercriminals have an infinitely larger attack surface to work with. Cyberattacks are getting more sophisticated, with the power to cripple an organization's operations, damage important IT assets and infrastructure, and wreak financial devastation.

As the cybersecurity landscape continues to rapidly evolve, organizations need to reevaluate their cybersecurity strategies to ensure they stay one step ahead of today's savvy cyber actors. What worked a few years ago is simply not sufficient today.

At Melillo, we will partner with you to build a stronger security posture and improve cross-department collaboration with an advanced, analytics-driven approach that ensures real-time security monitoring, advanced threat detection, forensics, and incident management. Using Security Information and Event Management (SIEM) tools and platforms, we'll help you keep pace with the rate and sophistication of today's threats, comply with evolving regulations, support governance requirements, and minimize risk.

OUR SECURITY EXPERTISE INCLUDES:

- **Policies and procedures:** Your data is only as secure as the policies and procedures that dictate its access and use. At Melillo, we'll work with you to create data policies and procedures that protect the collection, storage, and dissemination of your data to ensure it is safe and secure.
- **Event consolidation and correlation:** Backed by advanced security analytics expertise, our team will work with you to analyze event points and identify patterns and relationships to accurately predict and thwart potential attacks aimed at your organization.
- **Data Handling:** Our team of security pros will partner with you to ensure your data is managed in a way that supports data privacy and security, meets industry regulatory compliance, and allows your teams to enjoy uninterrupted work.
