GAIN A COMPETITIVE ADVANTAGE WITH OPENTEXT AND MELILLO CONSULTING

Maintaining a modern IT infrastructure that supports digital business acceleration requires careful consideration of a series of moving parts all at the same time—from application development and cybersecurity to compliance, IT operations management, and more. At Melillo, we offer advanced expertise in the OpenText portfolio of mission-critical technology solutions that help businesses accelerate, simplify, strengthen, and analyze their operations to power sustainable business success.

Add value with application delivery management

As businesses grow in the face of evolving technology, many organizations struggle to track business demands and ideas, make smart decisions about where to invest, and effectively manage projects. With OpenText Project & Portfolio Management (PPM) Software solutions, Melillo can help you streamline your PMO processes to add faster value to your business. With the ability to combine consistent controlled processes with the projects, programs, and portfolio data that's needed for organizational governance, Melillo can help your team focus on what matters with OpenText PPM.

Combat rising security threats

Cyberthreats are at an all-time high—and growing. As the business community continues to operate in a largely remote environment, cybercriminals have an infinitely larger attack surface to work with. With OpenText Cyber Security, Melillo will help you wage a full court press against today's most sophisticated attacks. You'll get the ability to protect against attacks, detect risk and threats, and intelligently adapt your security.

Stay audit-ready with data center automation

Amid persistent threats and increasingly complex compliance standards, IT teams struggle to proactively manage their IT compliance and patching processes. OpenText Data Center Automation (DCA) addresses these complexities by blending smarter patching, continuous compliance management, real-time visibility, advanced process orchestration, and enhanced reporting capabilities.

Unlock efficiencies across operations and engineering

As modern applications become increasingly distributed, network teams need to find new ways to unify network functions across traditional organizational structures. With Network Operations Management (NOM) from OpenText, Melillo can help you break down functional siloes of visibility, optimization, and action, enhance your network services, and orchestrate the configuration through automation.

At A Glance

Since 1988, Melillo has been helping organizations power their business through technology. We offer a full range of complete IT solutions that address customers' on-premises, hybrid, and cloud needs, with advanced expertise in infrastructure, development, security, and data management. Serving a range of industries, including healthcare, finance, insurance, manufacturing, and other organizations, Melillo helps customers create and execute digital business acceleration strategies that lower costs, boost ROI, minimize risk, and ensure compliance.
