RiskMit

As the prevalence of cyberattacks continues to grow at an unprecedented pace, many businesses find themselves increasingly vulnerable to damaging cyber-attacks—without adequate resources to effectively identify, prioritize, and respond to them. But failing to mitigate your organization's exposure to these emerging threats puts your business at significant risk of a breach, resulting in financial and reputational devastation.

FORTYFYING YOUR SECURITY POSTURE:

MelilloSMART RiskMit addresses this critical gap with our comprehensive risk mitigation management approach that expedites this process to reveal vulnerabilities, remediate them, and reinforce your security measures.

Using a proven four step process, we:

1. **Learn about your business:** As your partner, we work with you to discover your unique landscape, identifying the critical assets that drive your operations and how they might be impacted by potential threats.

2. **Attribute and contextualize:** Following the discovery phase, we link appropriate assets to your organization along with contextual information in an automated manner, eliminating the need for manual input.

3. **Test and prioritize:** Through systematic testing, we uncover vulnerabilities, then employ a risk-based approach to score and prioritize the most critical issues.

4. **Remediate and measure:** Finally, we tackle the identified vulnerabilities, applying fixes and patches as needed, then measure the effectiveness of these actions to ensure they are resolved and your security posture is strengthened against future attacks.

THE RiskMit DIFFERENCE

RiskMit offers advanced expertise for a quantifiable process that demonstrates measurable ROI. Our vendor-agnostic approach is tailored to the unique needs of your business—not tied to any single solution. Plus, you get a customized defense strategy that seamlessly integrates and protects your IT ecosystem. Want to learn more? Contact us here.
