PROTECT

As the prevalence of cyberattacks continues to grow at an unprecedented pace, many businesses find themselves increasingly vulnerable to damaging cyber-attacks without adequate resources to effectively identify, prioritize, and respond to them. Not understanding your organization's exposure to these emerging threats puts you at significant risk of a breach, resulting in financial and reputational devastation.

KNOWING YOUR SECURITY POSTURE:

MelilloSMART Protect managed service helps address this critical gap by giving you the visibility you need to combat these risks head. Our comprehensive Penetration Testing gives insight to enhance your security posture. Complete management of electronic records, with end-to-end audit trails and secure eSignatures.

Using a variety of automated and manual techniques, our skilled security experts perform Penetration Testing on a quarterly basis to accomplish the following:

- **Reconnaissance:** We gather information about your network, systems, and potential attack vectors.
- **Scanning & Discovery:** We identify services, open ports, and vulnerabilities.
- **Exploitation:** We simulate real-world attacks to assess your security team's response and identify gaps.
- **Documentation:** Detailed reporting on vulnerabilities discovered.

We then augment these efforts with monthly vulnerability scans to help you stay on top of your environment using known/publishes exploits from industry best-practice sources. This gives you the comprehensive coverage you require to ensure that your security strategy is as up to date as those who would exploit your business.
