

### DOES YOUR APPNETA ENVIRONMENT DELIVER THE MOST VALUE?

MELILLO  
CONSULTING

Are you getting the most out of your AppNeta subscription? Does it meet your monitoring requirements and achieve optimal results? If not, you may be facing issues with performance, connectivity, and overall poor user experience. We can help.

“

#### ***Dramatic Business Benefits: Customer Case Study***

*Using AppNeta Health Check our client's managed WAN provider complete visibility into every application and every user at every location. They were able to identify the cause of a significant WAN capacity bottleneck at headquarters resulting in a delivery of only 10% of the purchased capacity.*

*This bottleneck caused congestion in the last mile, resulting in significant packet loss, jitter, and latency spikes—all due to an improperly configured edge router. Due to early detection capabilities, the capacity constriction was fixed the same day and user experience restored. The network team saw a drastic reduction in MTTR from days to one hour.*

”

#### **Uncover Critical Gaps with Melillo's AppNeta Health Check**

As a Broadcom partner with advanced AppNeta expertise, Melillo Consulting will help you to optimize your current deployment through:

- **Monitoring Point Deployment:** Assess how communications are occurring between each network point—to ensure you have adequate monitoring disbursement across your networking infrastructure.
- **Delivery Monitoring:** Assess the connection network paths to critical applications to ensure the capture of key information. You get the ability to visualize how users or systems are connecting to applications and quickly identify where a problem may exist.
- **Experience Monitoring:** Determine how well you are capturing information about your applications' responses to user requests to ensure top performance.
- **Usage Monitoring:** If your headquarters has many users at one site, we look at your collective bandwidth across your hardware monitoring points.
